Project "TasteTS"

Multi-language support

1. **Library**
   Multi-language support is planned to be done using next-intl.
   The internationalization is set up using AppRouter, and i18n routing.

2. **Multi-language support in recipes**
   Ingredients, and recipes will have translations stored in the database. For regular ingredients, the translations will be already provided. For user input (e.g. user provided ingredients, the recipes itself) they will be completely optional, and up to the creator.

3. **Languages**
   First version of the program will support following languages:
   - English
   - Polish

4. **Future plans**
   German is planned to be added in the indefinite future.
